A: If you are looking to uninstall the program do this: Type "Add/Remove Programs" in the Start menu. Uninstall the program you want to remove, then reboot. Q: Bind ComboBox to DataTable when using AutoGenerateColumns = True i have been banging my head against the wall to try and get this combo box to work, i am trying to bind the selected value of the combo box to the selected value of the data table and vice versa. I can't figure out how to reference the data table column which is the one being selected as i would like the combo box to update when the datagrid is updated. Any help is much appreciated! Here is my code: Dim sqlConnection As New SqlConnection(ConfigurationManager.ConnectionStrings("mySQL").ConnectionString) Dim dataAdapter As New SqlDataAdapter Dim dataTable As New DataTable Dim sqlCommand As New SqlCommand("SELECT \* FROM database\_tbl", sqlConnection) dataAdapter.SelectCommand = sqlCommand dataAdapter.Fill(dataTable) dgProduct.DataSource = dataTable dgProduct.AutoGenerateColumns = True Dim bindingSource1 As New BindingSource bindingSource1.DataSource = dataTable comboBox1.DataSource = bindingSource1 comboBox1.DisplayMember = "Column\_Name" comboBox1.ValueMember = "Column\_Name" The ComboBox is not updating when the table is updated or any value is selected in the combo box. I have done some reading and i think this is my issue but i can't seem to get it to work. A: The problem is that you are not binding to the correct source. comboBox1.DataSource = bindingSource1 comboBox1.DisplayMember = "Column\_Name" comboBox1.ValueMember = "Column\_Name" These lines bind the combo box to the BindingSource. The BindingSource is meant to be bound to the DataTable. The DataTable is the source for the combo box (both the source and the DisplayMember and ValueMember properties of the ComboBox control are defined using the BindingSource). To bind the ComboBox to the DataTable, you need to create
